

Table1: Goals & Observations

This table describes the goals behind each task that we ask the user to do. We will note down the answers to the questions in the observations column during the session.

ID	Title	Goal	Observations
T1	Basic Setup and Campus Creation	Test the player's ability to understand the basic building mechanics.	Can the user place buildings without confusion? => Are there any struggles with map boundaries or placement restrictions? =>
T2	Ensuring Functionality	Test the player's ability to make a campus that meets the essential needs of students.	Does the user understand how to balance different needs and building placement for functionality? =>
T3	Handling Events	Evaluate the player's response to different events and their ability to maintain student satisfaction.	Does the user react appropriately to the event? => Are they able to mitigate negative events? =>
T4	Maximizing Student Satisfaction	Test how well the player can optimize the layout and campus facilities to maximize satisfaction over time.	Does the user understand how to optimize building placement and the layout to maintain satisfaction? =>
T5	Achievement Completion	Check if the player understands the rewards and achievements system.	Do they naturally understand and aim for the achievements? =>
T6	Game Navigation and Interface Usability	Evaluate the intuitiveness of the game's interface and navigation options.	Is the interface intuitive? => Do they understand how to pause and navigate between tasks, even if it's their first time playing? =>

Table2: Tasks & Metrics

This table clearly defines each of the tasks that we will ask the user to do. We will fill in the empty columns based on the results of the tasks during the evaluation session.

Task ID	Task Description	Success (Y/N)	Time to Complete (s)	Usability Issues	User Satisfaction (1-5)	Comments / Feedback
T1	Place at least one of each of the building types.					
T2	Build a fully functional campus - balance functional buildings while ensuring everything is in a reasonable proximity to one another.					
T3	React to a random event - make decisions, such as moving or building new structures.					
T4	Increase and maintain student satisfaction above 70% for 2 straight minutes.					
T5	Earn an achievement in the game.					
T6	Navigate through the game's interface and use all essential features (pause, building placement, events).					

Feedback Questionnaire:

We will ask players the following questions at the end of the play-test session to gather some constructive feedback for the improvement of our final product.

(Q) Overall, did you feel the game was too difficult, too easy, or just right?

(A)

(Q) What was your first instinct when you saw an event pop up?

(A)

(Q) Did you feel you had enough control over the campus layout and event handling?

(A)

(Q) How did you approach balancing building placement and reacting to events with student satisfaction?

(A)

(Q) Were you able to understand the correlation between your actions and the final score?

(A)

(Q) Any other comments / suggestions:

(A)
