

Implementation

Group Number: Cohort 1, Group 11

Group Name: Y111 Studios

Group Members:

1. James Hutchinson
2. Somto Igweonu
3. Robert Kisloski
4. Sam Knight
5. Kenneth Kok
6. Ashish Kumar

This document lists the third-party libraries and assets that we have used, and the licences under which they are made available, in the development of our game.

Third-Party Libraries

- **LibGDX v1.13.0**
 - A Java library that is used for building cross-platform 2D and 3D games.
 - **Licence** - Apache v2.0: <https://www.apache.org/licenses/LICENSE-2.0.txt>
- **LWJGL** (Used to launch LibGDX)
 - **Licence** - BSD-3-Clause - <https://www.lwjgl.org/license>
 - This licence is suitable for our project as it is an open source licence that allows commercial use and distribution of a copy of LWJGL in the source code for the game.
- **Gradle v8.12**
 - An open-source build automation tool that provides a flexible and efficient way to automate the building, testing, packaging, and deployment of software.
 - **Licence** - Apache v2.0 - <https://github.com/gradle/gradle/blob/master/LICENSE>
- **JUnit v5.11.2**
 - A testing framework that helps the developers write and run tests to ensure that the code is working properly.
 - **Licence** - <https://www.eclipse.org/legal/epl/epl-v20.html>
- **JaCoCo v0.8.12**
 - An open-source toolkit for measuring and reporting Java code coverage, distributed under the terms of the Eclipse Public License.
 - **Licence** - <https://www.jacoco.org/jacoco/trunk/doc/license.html>
- **Mockito v5.15.2**
 - An open-source mocking framework for unit tests written in Java, released under the MIT License.
 - **Licence** - <https://github.com/mockito/mockito?tab=MIT-1-ov-file>

Assets

- **Magipik**
 - **Licence** - <https://magipik.com/license>
 - The building assets are sourced from Magipik. This licence does not require attribution and allows commercial use if the asset is part of a larger project. This licence is therefore suitable for use in a small game like UniSim.
- **Kenney**
 - **Licence** - <http://creativecommons.org/publicdomain/zero/1.0/>
 - Some of the assets for our interface are sourced from Kenney. This licence does not require attribution and allows the assets to be used for personal, educational, and commercial purposes. It is therefore suitable for our project.
- **Martian Mono Font**
 - A monospaced version of the Martian Grotesk font for code style design.
 - **Licence** - <https://github.com/evilmartians/mono?tab=OFL-1.1-1-ov-file>

At the end of our development process for Assessment 2, we have implemented all of the features that were required for this assessment, meeting all the requirements that we have identified throughout the project.
